PROFESSIONAL SUMMARY

Second-year Computer Science Engineering student specializing in Data Science, focused on turning raw, messy datasets into dashboards and insights stakeholders can act on. Comfortable across the full analytics workflow: cleaning and modeling data in SQL, exploring it in Python, and presenting findings through Power BI and Tableau dashboards built for non-technical audiences. HackerRank-certified in SQL and IBM-certified in Data Fundamentals, looking to bring that same rigor to a data analytics internship.

TECHNICAL SKILLS

Programming & Analysis: Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly)

Databases & Query Languages: SQL (MySQL)

BI & Data Visualization: Power BI, Tableau, Microsoft Excel

Core Competencies: Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA), Dashboard Design, Data Modeling, Statistical Analysis, KPI Reporting, Data Storytelling

Soft Skills: Analytical Thinking, Problem-Solving, Attention to Detail, Communication

PROJECTS

End-to-End Retail Sales Analysis

SQL (MySQL) · Power BI

- Built an end-to-end retail analytics pipeline in SQL and Power BI, turning 12,000+ transaction records spanning 2022-2025 into a single executive-ready dashboard.
- Cleaned and standardized the raw dataset in SQL, resolving missing values, duplicate rows, and inconsistent formatting before analysis began.
- Designed 9 key visuals, including 5 KPI cards tracking \$1.55M in total revenue, 11.97K transactions, and a \$129.65 average order value.
- Built a payment-method comparison matrix (in-store vs. online) alongside category and top-10-customer breakdowns to surface best-selling segments.
- Added 3 dynamic slicers (Year, Payment Type, Location), letting stakeholders filter performance by time period, channel, and region without touching raw data.

Data Professional Survey Dashboard

Power BI

- Analyzed 630 survey responses from data professionals, cleaning and transforming the raw data into a single fact table using Power Query.
- Built a Power BI dashboard with 8 primary visuals, including a salary-by-job-title bar chart, a country-wise treemap of survey takers, and KPI gauges tracking an average respondent age of 29.87.
- Added interactive filters for dynamic demographic slicing, letting users break down results by role, country, and experience level.
- Found that 66.67% of respondents preferred Python over other languages, alongside clear salary premiums for Data Scientist roles.
- Quantified the gap between average work-life balance (5.74/10) and salary happiness (4.27/10), surfacing a key tension in the field.

EDUCATION

Vidyavardhini College of Engineering

2025 – 2029

Bachelor of Technology — Computer Science Engineering (Data Science)

CERTIFICATIONS

- SQL (Basic & Intermediate) — HackerRank
- Data Fundamentals — IBM
